WORK EXPERIENCE

KaHo Technologies Bengaluru, India
(Remote)

Software Development Engineer Intern

Sep 2026 - Present

- Built and shipped parent verification forms and real-time toast notification systems for a customer-facing Parent App, among 5+ production features and bug fixes, using Next.js, React, JavaScript, and TypeScript.
- Cut form submission failure rate by 50% (20% to 10%) by redesigning client-side validation logic and implementing structured error-handling across key user flows.
- Boosted image rendering performance by 60%+, achieving consistent sub-500ms load times and eliminating recurring stalling issues through optimized lazy-loading and caching strategies.

PROJECTS

KiranaWala - Local Store Connectivity Platform | MERN | GitHub May 2026

- Architected a MERN platform connecting customers with local stores within an 8 km radius for product discovery and online ordering.
- Developed RESTful APIs for authentication and order management using Node.js, Express.js, and MongoDB, with automated Jest/React Testing Library test coverage.
- Validated ordering workflows end-to-end across 80+ products and 3+ stores, including cart, checkout, and order-status flows.

Tech Stack: React.js, TypeScript, Redux Toolkit, Node.js, Express.js, MongoDB, JavaScript, HTML5, CSS3, Jest, React Testing Library

AskPDF - RAG-Powered Document Q&A System | RAG | GitHub Apr 2026

- Built a 5-stage RAG pipeline in Node.js for PDFs up to 20 MB, generating 768-dimensional embeddings for semantic vector search.
- Engineered Redis BRPOP workers with 202 Accepted async responses, hash-based job tracking, and stale-job cleanup for reliable background processing.
- Reduced hallucination risk by enforcing a >0.7 similarity threshold before passing retrieved context to the LLM for generation.

Tech Stack: Node.js, MongoDB, Redis, Gemini API, RAG, Embeddings, Vector Search, Vercel

FixMyWay - AI-Powered Civic Issue Reporting Mobile App | GitHub Sep 2026

- Engineered a civic reporting pipeline handling 5 issue categories, combining GPS tagging, image uploads, and duplicate detection to prevent redundant reports.
- Integrated Gemini Vision AI with a 2-model fallback for image validation, issue classification, severity estimation, and description generation.
- Designed a 5-factor priority-scoring algorithm combining community confirmations and 30-day rainfall data for pothole risk analysis.

Tech Stack: React Native, Expo, TypeScript, Firebase, Firestore, Gemini Vision AI, Google Maps, Open -Meteo API

TECHNICAL SKILLS

- Programming Languages: Java, C++, JavaScript (ES6+), TypeScript, Python
- Frameworks & Libraries: React.js, HTML5, CSS3, Next.js, Node.js, Express.js, Redux Toolkit, Tailwind CSS
- Databases & Tools: MySQL, PostgreSQL, MongoDB, Redis, Git, GitHub, Docker, Jest, Postman
- Generative AI: Gemini API, RAG, Vector Search, Embeddings
- Relevant Coursework: DSA, OOP, Database Management Systems, Computer Networks, Operating Systems
- Soft Skills: Problem-Solving, Communication, Collaborative Teamwork, Adaptability

EDUCATION

Lovely Professional University Phagwara, Punjab

Bachelor of Technology, Computer Science and Engineering; CGPA: 8.1

Aug '24 - Present

ACHIEVEMENTS

- Solved 200+ DSA problems with a 100-day active streak on LeetCode | LeetCode
- Solved 150+ DSA and CS fundamentals problems on GFG | GeeksforGeeks
- Merged 5 open-source PRs across 120+ GitHub contributions | GitHub
